7. Staff On the date June 30, 2026 The company has 28 staff (as of today) March 31, 2026: 28 employees).

8. Statements regarding the comparability of information in financial statements. The corresponding figures from the previous year are comparable to those of this year.

9. Provide explanations of other information in the Financial Statements in accordance with relevant legal regulations such as corporate law, securities law, etc.

II. Accounting period and currency used in accounting

1. Annual accounting period(starting on January 1, 2026 and ending on December 31, 2026).
2. Currency used in accounting. The currency used in accounting is the Vietnamese Dong (VND) because most transactions are conducted in VND.

III. Applicable Accounting Standards and Regulations

1. Applicable accounting systemThe company applies Vietnamese accounting standards, the Vietnamese Enterprise Accounting System issued under Circular No. 99/2025/TT-BTC dated October 27, 2025, and other circulars guiding the implementation of accounting standards issued by the Ministry of Finance in the preparation and presentation of consolidated financial statements.

2. Statement on compliance with Vietnamese Accounting Standards and Accounting Regulations The financial statements are prepared in accordance with Vietnamese accounting standards, the Vietnamese Enterprise Regulations, and relevant legal regulations concerning the preparation and presentation of financial statements.

IV. Applicable accounting policies, accounting estimates, and relevant legal regulations.

1. Principles for converting financial statements prepared in foreign currency to Vietnamese DongEconomic transactions denominated in foreign currency are converted into Vietnamese Dong at the actual exchange rate at the time of the transaction. At the end of the year, monetary items denominated in foreign currency are converted using the average interbank exchange rate published by the State Bank of Vietnam. Actual exchange rate differences arising during the period and exchange rate differences resulting from the revaluation of monetary item balances at the end of the year are transferred to financial revenue or expenses in the fiscal year.

2. Types of exchange rates applied in accounting

- The exchange rate selected for accounting purposes when dealing with exchange rate differences arising during the period and the exchange rate used when revaluing monetary items denominated in foreign currency;

Cross-exchange rates are calculated in cases where banks do not publish exchange rates for foreign currencies;

- The gold purchase price announced by the State Bank of Vietnam or the reference purchase price of units legally authorized to trade gold will be used when re-evaluating monetary gold at the end of the accounting period.

3. Principles for recognizing cash and cash equivalents. Money includes cash and demand deposits.

4 Principles of Accounting for Financial Investments

a) Trading securities;Principles for recording short-term and long-term securities investments:Securities investments at the time of reporting, if: - They have a redemption or maturity period of no more than 3 months from the date of purchase, are considered "cash equivalents". - They have a payback period of less than 1 year or within 1 business cycle and are classified as short-term assets. - They have a payback period of more than 1 year or more than 1 business cycle and are classified as long-term assets.Principles for recognizing other short-term and long-term investments:Other investments at the time of reporting, if: - They have a payback or maturity period of no more than 3 months from the date of purchase of the investment are considered cash equivalents; - They have a payback period of less than 1 year or within 1 business cycle and are classified as short-term assets; - They have a payback period of more than 1 year or more than 1 business cycle and are classified as long-term assets.

b) Investments held until maturity;

c) Investing in subsidiaries; joint ventures, associated companies;Investments in subsidiaries and associates are accounted for using the cost method. Net profits distributed from subsidiaries and associates arising after the investment date are recognized in the Income Statement. Other distributions (besides net profits) are considered recoveries of investments and are recognized as deductions from the cost of the investment.

d) Investing in other entities;Investments in equity instruments of other entities include investments in equity instruments where the Company does not have control, co-control, or significant influence over the investee. Investments in equity instruments of other entities are initially recognized at cost, including the purchase price or capital contribution plus direct costs associated with the investment. Dividends and gains from periods prior to the investment are accounted for as a reduction in the value of the investment itself. Dividends and gains from periods after the investment is acquired are recognized as financial revenue. Dividends received in the form of shares are tracked only in terms of the number of additional shares received, not the value of the shares received.

d) Accounting methods for other transactions related to financial investments. Provisions for losses on investments in equity instruments of other entities are established as follows: • For investments in listed shares or where the fair value of the investment can be reliably determined, the provision is based on the market value of the shares. • For investments whose fair value cannot be determined at the reporting date, the provision is based on the loss of the invested entity, with the provision amount equal to the difference between the actual investment capital of the owners and the equity capital at the end of the financial year multiplied by the ratio of the Company's charter capital to the total contributed charter capital in the other entity. Increases or decreases in the amount of the provision for losses on investments in equity instruments of other entities that need to be established at the end of the financial year are recognized as financial expenses.

5. Principles of accounting for accounts receivable

Accounts receivable are presented at their book value less any provision for doubtful accounts. The classification of receivables into customer receivables and other receivables follows these principles: • Customer receivables reflect commercial receivables arising from purchase-sale transactions between the Company and buyers that are independent entities. • Other receivables reflect non-commercial receivables that are not related to purchase-sale transactions. A provision for doubtful accounts is established for each doubtful receivable after offsetting it against any payables (if applicable). The amount of the provision is based on the age of the overdue receivables or the projected potential loss. Increases or decreases in the balance of the provision for doubtful accounts to be established at the end of the fiscal year are recorded as business management expenses.

5. Principles of Inventory Accounting

- Inventory recognition principle: cost principle.

Inventory valuation method: weighted average

- Accounting method: perpetual inventory

Methods for creating provisions for inventory devaluation Provisions for inventory devaluation are established for each inventory item whose original cost exceeds its net realizable value. Increases or decreases in the balance of the inventory devaluation provision required at the end of the fiscal year are recorded in the cost of goods sold.

6. Principles of accounting and depreciation of tangible fixed assets (including perennial plants producing periodic products, working animals), intangible fixed assets, leased fixed assets, and investment properties.

Tangible fixed assets are represented at their original cost less accumulated depreciation. The original cost of a tangible fixed asset includes all expenses incurred by the Company to acquire the asset up to the point it is ready for use. Expenses incurred after initial recognition are only added to the original cost of the fixed asset if these expenses are certain to increase future economic benefits from the use of the asset. Expenses that do not meet this condition are recognized as production and business expenses for the year. When a tangible fixed asset is sold or liquidated, the original cost and accumulated depreciation are written off, and any profit or loss arising from the liquidation is recognized as income or expense for the year. Tangible fixed assets are depreciated using the straight-line method based on their estimated useful life. The depreciation period for tangible fixed assets is as follows: Type of fixed asset Number of years Machinery and equipment 6 Transportation and transmission vehicles 7-8 Management equipment and tools 3-4 * Investment properties Investment properties are a portion of the company's owned property used for the purpose of generating rental income. Leased investment properties are represented at cost less accumulated depreciation. The cost of an investment property is the total cost incurred by the company or the fair value of the amounts given in exchange for acquiring the investment property up to the time of purchase or completion of construction. Costs related to investment properties incurred after initial recognition are recognized as expenses, unless these costs are likely to cause the investment property to generate more future economic benefits than initially assessed, in which case they are added to the cost. When an investment property is sold, the original cost and accumulated depreciation are written off, and any resulting gains or losses are accounted for as income or expenses in that year.

7. Accounting principles for various types of business cooperation contracts.

According to Circular 99/2025/TT-BTC (effective from January 1, 2026), accounting for business cooperation contracts (BCCs) is based on their economic nature and is divided into three main types: joint control of assets, joint control of operations, or profit sharing.

8. Accounting principles for deferred expenses.

Deferred expenses are recognized for future payments related to goods and services received. Deferred expenses are recognized based on reasonable estimates of the amount due and the timeframe for allocation.

9. Principles for recognizing liabilities and accrued expenses. Accounts payable and accrued expenses are recognized for future amounts due related to goods and services received. Accrued expenses are recognized based on reasonable estimates of the amount due. The classification of accounts payable as accounts payable to suppliers, accrued expenses, and other payables is done according to the following principles: • Accounts payable to suppliers reflect commercial liabilities arising from the purchase of goods, services, and assets, where the seller is an independent entity from the Company. • Accrued expenses reflect liabilities for goods and services received from suppliers or provided to buyers but not yet paid due to the lack of invoices or insufficient accounting documentation, and liabilities to employees for vacation pay, and other production and business expenses that must be accrued. • Other payables reflect non-commercial liabilities that are not related to the purchase, sale, or provision of goods and services. Liabilities and expenses are classified as short-term and long-term on the consolidated balance sheet based on the remaining term at the end of the financial year

10. Accounting principles for dividend and profit payments. Dividends are recognized as liabilities in the period in which they are disclosed.

11. Principles of accounting for deferred corporate income tax. Deferred income tax is corporate income tax payable or refundable due to temporary differences between the carrying value of an asset and a liability for the purpose of preparing financial statements and the income tax basis. Deferred income tax payable is recognized for all taxable temporary differences. Deferred income tax assets are only recognized when it is certain that there will be future taxable profits to utilize these deductible temporary differences. The carrying value of deferred income tax assets is reviewed at the end of the accounting period and is written down to the extent that it is certain that there will be sufficient taxable profits to utilize part or all of the deferred income tax asset. Previously unrecognized deferred income tax assets are reviewed at the end of the accounting period and recognized when it is certain that there will be sufficient taxable profits to utilize these unrecognized deferred income tax assets. Deferred income tax assets and deferred income tax liabilities are determined at the tax rate expected to apply for the year in which the asset is recovered or the liability is settled, based on the tax rates in effect at the end of the financial year. Deferred income tax is recognized in the Statement of Income and is only directly recorded in equity when the tax relates to items directly recorded in equity. Deferred income tax assets and deferred income tax liabilities are offset when: • The company has a legal right to offset current income tax assets against current income tax payable; and • These deferred income tax assets and deferred income tax liabilities relate to corporate income tax administered by the same tax authority: - For the same taxable entity; or - The company intends to settle current income tax payable and current income tax assets on a net basis or by asset recovery concurrently with the settlement of liabilities in each future period when material amounts of deferred income tax payable or deferred income tax assets are settled or recovered.

12. Principles for recording loans and financial lease liabilities. Borrowing costs include interest and other expenses directly related to loans. Borrowing costs are recognized as expenses when incurred. If borrowing costs are directly related to the investment in construction or production of an asset under construction that requires a sufficiently long period (over 12 months) to be put into use for its intended purpose or sold, these borrowing costs are included in the value of that asset. For loans specifically for the construction of fixed assets or investment properties, interest is capitalized even if the construction period is less than 12 months. Income arising from temporary investments in loans is recorded as a reduction in the original cost of the related asset.

13. Principles for recognizing and capitalizing borrowing costs. - Borrowing costs are recognized as operating expenses in the period in which they are incurred, except for borrowing costs directly related to investment in construction or production of work-in-progress assets, which are included in the value of those assets (capitalized) when all the conditions stipulated in Vietnamese Accounting Standard No. 16 "Borrowing Costs" are met. - Borrowing costs directly related to investment in construction or production of work-in-progress assets are included in the value of those assets (capitalized), including interest on loans, allocation of discounts or premiums when issuing bonds, and ancillary expenses incurred related to the loan application process.

14 Principles for Recognizing Equity:

Owner's equity contribution Owner's equity is recorded based on the actual amount of capital contributed by the shareholders. **Share premium** Share premium is recognized as the difference between the issue price and the par value of shares upon initial or supplementary issuance, the difference between the reissue price and the book value of treasury shares, and the equity component of convertible bonds upon maturity. Direct costs related to supplementary share issuance and reissue of treasury shares are recorded as a reduction in share premium.

- Principles for recognizing undistributed profits. Profits after corporate income tax are distributed to shareholders after the allocation of funds as stipulated in the Company's Charter and legal regulations, and after approval by the General Meeting of Shareholders. The distribution of profits to shareholders takes into account non-monetary items within undistributed profits that may affect cash flow and dividend payment capacity, such as gains from the revaluation of contributed assets, gains from the revaluation of monetary items, financial instruments, and other non-monetary items.

15. Principles and methods for recognizing revenue and other income:

- Revenue from sales and services

+ Revenue from real estate sales Revenue from the sale of real estate in which the Company is the developer is recognized when all of the following conditions are met simultaneously: • The real estate has been fully completed and handed over to the buyer, and the Company has transferred the risks and benefits associated with ownership of the real estate to the buyer. • The Company no longer holds the right to manage the real estate as the owner or the right to control the real estate. • The revenue is determined with reasonable certainty. • The Company has received or will receive economic benefits from the real estate sale transaction. • The costs related to the real estate sale transaction can be determined. In cases where the customer has the right to complete the interior of the real estate and the Company carries out the interior finishing according to the customer's design, style, and requirements under a separate interior finishing contract, revenue is recognized upon completion and handover of the unfinished construction to the customer.

Revenue from providing services. Revenue from providing services is recognized when the following conditions are simultaneously met: • The revenue is determined with reasonable certainty. When the contract stipulates that the buyer has the right to return the purchased service under specific conditions, revenue is only recognized when those specific conditions no longer exist and the buyer no longer has the right to return the service provided. • The company has or will obtain economic benefits from the service transaction. • The portion of work completed at the reporting date can be determined. • The costs incurred for the transaction and the costs to complete the service transaction can be determined. If the service is performed over multiple periods, the revenue recognized in the period is based on the results of the portion of work completed as of the end of the accounting period.

Rental income from real estate Rental income is recognized using the straight-line method over the lease term. Advance rent payments for multiple periods are allocated to revenue in proportion to the lease term.

+ Revenue from the sale of real estate includes tourist apartments, office spaces with accommodation, or similar properties.

+ Revenue from the sale of investment properties.

- **revenue from financial activities;** Financial income mainly consists of interest on bank deposits, recognized based on the bank's monthly deposit interest notification.

- Other income.

16. Accounting principles for revenue deductions.

Focus on accurately recording trade discounts, sales rebates, and sales returns.

17. Principles of cost of goods sold accounting.

Accurately record the original cost, anticipate expenses, and handle any discrepancies exceeding the budget to ensure an accurate reflection of business performance.

18. Principles of accounting for financial costs.

Adhering to the matching and prudence principles, record actual expenses incurred, including interest expenses, exchange rate losses, investment costs, and capital gains-related losses; do not record expenses before they are incurred.

19. Principles of accounting for selling expenses and administrative expenses.

Expenses are recognized as soon as they are incurred, separating expenses related to revenue from general administrative expenses.

IV. Additional information for items presented in the Statement of Financial Position
